## Introduction

The ITSO Intellectual Property Tracking and Registration System is a web-based application designed to help the Innovation Technology Support Office (ITSO) manage intellectual property submissions and registration activities more efficiently. The system provides a centralized platform for organizing, reviewing, and tracking all intellectual property applications.

It streamlines the workflow by digitizing application submissions and implementing a clear, step-by-step status progression. When a Coordinator creates a new application, it is automatically placed in the Pending status. The Chairperson then reviews and accepts the application, moving it to Ongoing. While in the Ongoing stage, the Chairperson evaluates the submission and decides whether it should be returned for revision or approved. Once approved, the application reaches its final Completed status.
